EDUCATION

UNIVERSITY of Houston

- B.S. in Computer Science
- Houston, TX | May 2020
- Cum Laude

SKILLS

LANGUAGES

- C#
- Python
- Pandas
- MongoDB
- C++
- PostgreSQL

TOOLS/Frameworks

- Git
- Function App
- Django
- .Net
- PowerBI
- Data Visualization
- Data Modelling
- Docker
- Logic Apps
- Razor Pages
- ABBY
- MongoDB
- Ansible
- DevOps

CERTIFICATIONS

- Microsoft Azure 204 – Developing Solutions
- Microsoft Azure 900 – Developing Solutions
- ABBY FlexiCapture Specialist
- Certified SAFe 5 Practitioner
- Certified Scrum Master (CSM)
- Python for Data Science (Digital Certificate from IBM)

INTERESTS

- Participated in **Return-to-work ambassador** program to serve as a friendly face for workers returning to office.
- Took part in **recruiting college hires** and collaborated with fellow recruiters in hiring decisions
- Mentored** new associates

EXPERIENCE

CHEVRON

Software Engineer | July 2020 – Present | Houston, TX

- Developed and deployed a full stack web application 'Sqlizer' using **Azure Function Apps** and **Razor Pages** to streamline the process of End of Life of Oracle.
- Utilized the power of a third-party tool called **Antlr** to tokenize the PLSQL statements to be converted into TSQL.
- Analyzed what APIs from SAP are hosted containing business location data and built an interface to pull data from those APIs. Utilized the power of **Logic Apps/Function Apps**.
- Configured the **Azure Service Bus** (fully managed enterprise integration message service) and wrote code in Azure Function Apps for data mapping to onboard it into the business application
- Collaborated with the offshore team as well as the business owner to implement **ABBY** (OCR engine) into our business application. Utilized **UI Path** along with ABBY to automate the process flow.
- Utilize a **PostgreSQL image** from **Docker Hub** in building a docker file according to the environment needs and store it in **Azure Container Registry** for future use. Created a **playbook** to automate the provisioning of the **Azure Container Instance**.

UNIVERSITY of HOUSTON

Python Developer | April 2020 – June 2020 | Houston, TX

- Used Twitter Streaming API and Search API to **scrape tweets** in real-time using **Python** library called Tweepy.
- Stored the results in JSON format and refined the results and stored it to a **MongoDB database**.

SCRIPTLY RX

Software Engineering Intern | Oct 2019 - February 2020 | Houston, TX

- Assisted in Web development to support **SEO** and customer acquisition goals.
- Provided front end and backend support and debugged issues in production.

PROJECTS

Station Monitoring Tool (SMT) – Data Science Development Program

- Created a warning system to predict runouts at ~1700 retail inventory managed stations.
- Developed a model using **Time Series forecasting** that gave us prediction capabilities for runouts at our inventory managed stations
- Used sales, inventory, and other data points to create a list of at-risk stations with probability of a runout.
- Resulted in 50% reduction in runouts resulting in savings of **USD 14K per year**.

AUTOMATION SCRIPT - Personal

- Created a script using **Python** to automate certain work tasks as directed by the manager.
- Developed a fully functioning database, performed queries to retrieve results and **shrunk paper usage by 75%**.
- Developed a friendly GUI for the script using **Tkinter** and added more features like Real-time Weather detection which can give weather details of any zip code.
